

Auto Social Media page

On this page, Joy, the Social media queen AI (see Joy's description in the document called What is Wonder George) takes care of selecting the most effective social media platforms for the user and creating posts at the right frequency..

On this page, there is a video, the success index, the activation button, the selection of social media accounts and posting frequency and the list of all the social media content created by Joy.

Video

Before Joy is activated, there is a video of George and Joy explaining what the auto Social Media feature does and how it can help the user succeed. After activation Joy explains what she's doing again.

Success Index

The success index displays the current chances of succeeding for our client.

Activation button

When clicked, Joy will start creating social media posts according to the settings. 10 minutes after activation, the first posts will be available in the list down below. Joy also sends a daily email to the user with all the social media posts she created for that day.

List of social media and frequency

When the page loads, before activation, Joy suggests the right social media platforms to use as well as the posting frequency. The user is free to change the settings before activating Joy.

The list of posts

Every time Joy creates a social media post, she adds it to the list. All posts are displayed in chronological order. Posts can be copied in one click or deleted.
